Winter 2015

It wouldn't be a winter in Chicago without record-breaking temperatures and/or snowfall. As of February 27th, this is the 2nd coldest February since 1875 and the 3rd snowiest. This is the first February in which temperatures have yet to rise above 32°. Nogas Landscaping has done our best to keep up with the demands of snow removal for each of our properties. Our crews have continued to work diligently through the challenging weather conditions, while also preparing all equipment for the spring season. We value your feedback, so any and all comments and concerns are welcome and encouraged. Your feedback aids in our ability to provide the best customer service possible.

As we anticipate the coming of the spring season, we ask that you consider your spring walk-throughs. These walk-throughs are vital to the maintenance and service of the property. Your input allows us to have a clear understanding of your expectations and concerns for the coming season. As always, we value your business and look forward to providing superior service in the coming year.
