NOGAS Newsletter

September 2011

As our hot Summer Season comes to a close, we look forward to the milder temperatures that fall will bring to allow the recovery of grass and plants. Our crews are completing another round of bush trimming and fertilizing, while continuing to maintain the routine services. As always, we welcome all of your specific concerns or questions.

More specifically, the record heat, and minimal rainfall we experienced during the month of July resulted in draught conditions and fungus for many properties. These draught conditions caused many lawns to suffer turf damage and unrecognizable dollar spot fungus. Although the weather cooled off and rainfall became steadier, many lawns did not fully recover, and will therefore require slit seeding. Please contact Noga's for a free quote concerning these areas.

As a reminder, we have yet to receive all of our renewed contracts. If you have not sent us your renewed contract, we ask that you please forward it to us as soon as possible. Should you have any questions or need another copy sent to you, please contact us. We appreciate your help as this allows us to organize our client rosters, ensuring the quality service you expect.

As always, we value your business and should you be satisfied with Nogas, we ask that you refer us to other Associations as well. We do offer an incentive for successful referrals. In addition, the cold weather season is fast approaching; we ask that you notify us of any necessary changes in your Snow Contract as well. In closing, we look forward to a continued successful relationship in the upcoming seasons.

FUN FACT A 50X50 ft lawn daily releases enough oxygen to meet the needs of a family of 4 for 24 hours and absorbs carbon dioxide, ozone, hydrogen fluoride and other toxins.
