NEWSLETTER SUMMER 2012

As you are most likely aware, we are currently experiencing the worst drought conditions since the 1950's. During these times it is not uncommon for Villages and Municipalities to enforce watering bans. We at Nogas remain committed to the maintenance and care of your landscape, and we ask that, when possible, the unit owners take these small measures to help preserve the plant material and turf.

- SHRUBS -- Water 2x per week at 1/2 volume at the base of the plant, for 1-2 minutes per plant.
- PERRENIALS -- Water 2x per week at 1/2 volume for 1 minute per plant
- EVERGREENS -- Water at 1/4 volume (a slow trickle) for 10 minutes on each side
- DECIDUOUS -- Water at 1/4 volume for 10 minutes on each side.
- SOD -- Water sod 1x per day for 20 minutes.

During the serious weather conditions we are currently experiencing, we appreciate that your taking the watering and care of your landscape seriously. In doing this, we will greatly reduce the need for repair and replacement. Furthermore, we at Nogas continue to provide the best quality service and are happy to assist the owners in watering if they are unable to. With the owner's permission, and water provided, Nogas can provide watering service.

As always, we appreciate your continued business and should you have any questions or concerns, please don't hesitate to contact us. Stay Cool!

Sincerely,

NOGAS LANDSCAPING
